1. PREFACE

1.1. PURPOSE OF THIS DOCUMENT

This document will assist the user to setup the DF1 Router to allow remote RSLogix 5000 programming of a Logix Controller (ControlLogix/CompactLogix).

1.2. ADDITIONAL INFORMATION

The following resources contain additional information that can assist the user with the module installation and operation.

<table>

1.3. SUPPORT

Technical support will be provided via the Web (in the form of user manuals, FAQ, datasheets etc.) to assist with installation, operation, and diagnostics.

For additional support the user can use either of the following:

- Contact Us web link [www.aparian.com/contact-us](http://www.aparian.com/contact-us)
- Support email support@aparian.com
2. APPLICATION DESCRIPTION

The Aparian DF1 Router can be used to enable multiple modern Ethernet devices to communicate to various Logix Controllers via their DF1 serial ports. In the application example below, a remote RSLogix 5000 programming station can communicate with, and program an CompactLogix controller.

![Diagram of network setup with RSLogix 5000, EtherNet/IP, Aparian DF1 Router, CIP Serial (RS232), and CompactLogix]

FIGURE 1 - EXAMPLE OF A TYPICAL NETWORK SETUP
3. SETUP

The following sections will describe the installation and configuration of all the required devices to assist the user with the initial setup.

3.1. SERIAL CABLE WIRING

The serial cable pinout is shown in the figure below:

![Diagram of Serial Cable Pinout]

Figure 2 – Serial Cable Pinout
3.2. DF1 ROUTER SETUP

The DF1 Router must be configured in Transparent PCCC mode, as shown below.

![DF1 General Configuration](image)

**Figure 3 – DF1 General Configuration**

In the Serial-DF1 settings, the protocol must be set to Full Duplex. The BAUD Rate, Parity and Error Detection must match that of the Logix Controller (as configured using RSLogix 5000).

![DF1 Serial Configuration](image)

**Figure 4 – DF1 Serial Configuration**
No Transparent PCCC mapping items are required to be configured.

![Figure 5 - Transparent PCCC Configuration](image)

**NOTE:** The CIP over DF1 option **MUST** be selected for programming CompactLogix/ControlLogix controllers.

### 3.3. LOGIX SETUP (RSLOGIX 5000)

Using RSLogix5000, the DF1 serial port must be configured to match that of the DF1 Router’s serial port settings with respect to BAUD rate, Parity and Error Detection.

![Figure 6 - System Protocol Configuration](image)

**NOTE:** The DF1 Point to Point must be selected, and the Duplicate Packet Detect option must be removed.
3.4. RSLINX SETUP

The DF1 Router’s EDS file must be registered on the programming PC. This can be achieved in two ways:

- Uploading the EDS file from the DF1 Router online, or
- Downloading the EDS file from the Aparian website and manually registering it.

**NOTE:** Older revision of RSLinx may not support the uploading of the EDS file option, in which case, the second (manual) option should be used.

**UPLOADING EDS FILE FROM MODULE**

First add the DF1 Router module in RSLinx. Under the Communications menu select the Configure Drivers menu item.
FIGURE 8 – RSLinx DRIVER CONFIGURATION

In the driver selection window, add the **Ethernet Devices** driver.

FIGURE 9 – RSLinx ETHERNET DEVICES DRIVER

Add the IP address of the DF1 Router.

FIGURE 10 – RSLinx ETHERNET IP ADDRESS
If the DF1 Router is powered and connected on the network it will appear in the RSLinx’s RSWho browse window. Note that the device icon will be a yellow question mark, as the EDS file has not yet been registered.

Right-click on the DF1 Router in the RSWho browser and select the “Upload EDS file from device” option.

![Image of RSLinx with DF1 Router selected and context menu open]

**FIGURE 11 – RSLINX UPLOAD EDS FILE FROM DEVICE**

The Rockwell Automation EDS Wizard will then launch. Follow the multiple steps by pressing the Next button and complete the EDS file registration.

**FIGURE 12 – EDS WIZARD**
NOTE: Depending on the RSLinx revision, RSLinx may need to be shut-down and re-started. If RSLinx is running as a service, make sure the service is shut-down completely before re-starting.

After restarting RSLinx, the DF1 Router will correctly appear in the RSWho browser. It will also show the underlying DF1 Port, which, when expanded, will show the underlying Logix Controller.

![Figure 13 - Browsing the Logix Controller via DF1 Router](image)

**Figure 13 – Browsing the Logix Controller via DF1 Router**
MANUALLY INSTALLING THE EDS FILE OPTION

To install the DF1 Router’s EDS file manually, it must first be downloaded from the Aparian website: [http://www.aparian.com/products/df1router#downloads](http://www.aparian.com/products/df1router#downloads)

The EDS file and associated icon are zipped in a single file. Save the file to local hard drive and unzip the file.

Using the Windows start button launch the Rockwell Software’s *EDS Hardware Installation Tool*.

---

![Figure 14](image)

**Figure 14 – Launch EDS Hardware Installation Tool**

In the *Hardware Installation Tool*, select the *Add* option.

---
Use the **Browse** button to navigate to the folder where the EDS file was unzipped and select the EDS file.
Follow the prompts and select the Next button to complete the EDS file registration.

**NOTE:** Depending on the RSLinx revision, RSLinx may need to be **shut-down and re-started**. If RSLinx is running as a service, make sure the service is shut-down completely before re-starting.
3.5. RSLOGIX 5000

Programming using RSLogix 5000 can then continue as normal. Inside RSLogix5000 under the **Communications** menu, select the **Who Active** item.

![System Communication](image1)

**Figure 19 – System Communication**

In the Communications window, browse to the Logix controller under the DF1 Router, and select Online, Upload or Download as required.
